Paper 3 Advanced Practical Skills 1

May/June 2020

2 hours

You must answer on the question paper.

You will need: The materials and apparatus listed in the confidential instructions

INSTRUCTIONS

- Answer **all** questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do **not** use an erasable pen or correction fluid.
- Do **not** write on any bar codes.
- You may use a calculator.
- You should show all your working, use appropriate units and use an appropriate number of significant figures.
- Give details of the practical session and laboratory, where appropriate, in the boxes provided.

Session	
Laboratory	

INFORMATION

- The total mark for this paper is 40.
- The number of marks for each question or part question is shown in brackets [].
- The Periodic Table is printed in the question paper.
- Notes for use in qualitative analysis are provided in the question paper.

For Examiner's Use

This document has **12** pages. Blank pages are indicated.

Quantitative Analysis

Read through the whole method before starting any practical work. Where appropriate, prepare a table for your results in the space provided.

Show your working and appropriate significant figures in the final answer to **each** step of your calculations.

- 1 Ethanedioic acid forms salts with Group 1 metals. In this experiment you will identify the Group 1 metal ion, Z^+ , present in an ethanedioate salt, $(\text{COO})_2Z_2$. You will titrate a solution of the salt with acidified aqueous potassium manganate(VII). The equation for the reaction between manganate(VII) ions and ethanedioate ions in acidic solution is shown.

FA 1 is $0.0200 \text{ mol dm}^{-3}$ potassium manganate(VII), KMnO_4 .

FA 2 is a solution containing 8.06 g dm^{-3} of an ethanedioate salt, $(\text{COO})_2Z_2$.

FA 3 is dilute sulfuric acid, H_2SO_4 .

(a) Method

- Fill the burette with **FA 1**.
- Pipette 25.0 cm^3 of **FA 2** into a conical flask.
- Use the measuring cylinder to transfer 25 cm^3 of **FA 3** into the same conical flask.
- Place the conical flask on the tripod and gauze and heat the conical flask until the temperature of the solution is approximately 70°C .
- **Carefully** remove the hot conical flask and place it on the white tile under the burette.
- During titrations, add **FA 1**, **slowly at first**, until a permanent pale pink colour is formed. (The pink colour on initial addition may take several seconds to disappear.) If the reaction mixture turns brown, reheat it to approximately 70°C . If the brown colour disappears, continue with the titration. If the brown colour remains, discard the contents of the flask and begin a new titration.
- Perform a rough titration (the end-point is a permanent pale pink colour) and record your burette readings in the space below.

The rough titre is cm^3 .

- Carry out as many accurate titrations as you think necessary to obtain consistent results.
- Make sure any recorded results show the precision of your practical work.
- Record all of your burette readings and the volume of **FA 1** added in each accurate titration.

I	
II	
III	
IV	
V	
VI	
VII	

[7]

- (b) From your accurate titration results, obtain a suitable value for the volume of **FA 1** to be used in your calculations.
Show clearly how you obtained this value.

25.0 cm³ of **FA 2** required cm³ of **FA 1**. [1]

(c) Calculations

- (i) Give your answers to **(c)(ii)**, **(c)(iii)**, **(c)(iv)** and **(c)(v)** to the appropriate number of significant figures. [1]
- (ii) Calculate the number of moles of manganate(VII) ions in the volume of **FA 1** calculated in **(b)**.

moles of MnO₄⁻ = mol [1]

- (iii) Use the equation on page 2 to calculate the number of moles of ethanedioate ions in 25.0 cm³ of **FA 2**.

moles of (COO)₂²⁻ = mol [1]

- (iv) Calculate the relative formula mass, M_r , of the ethanedioate salt, (COO)₂Z₂.

M_r of ethanedioate salt = [1]

- (v) Calculate the relative atomic mass, A_r , of the Group 1 metal, Z, in the ethanedioate salt.
Show your working.

A_r of Z =

Hence identify Z.

Z is [2]

[Total: 14]

- 2 In this experiment you will determine the value of x in the formula for hydrated manganese(II) sulfate, $\text{MnSO}_4 \cdot x\text{H}_2\text{O}$, where x is an integer. You will do this by measuring the mass lost when a sample of hydrated manganese(II) sulfate is heated.

FA 4 is hydrated manganese(II) sulfate, $\text{MnSO}_4 \cdot x\text{H}_2\text{O}$.

(a) Method

- Weigh the crucible with a lid and record the mass.
- Add all the **FA 4** to the crucible.
- Reweigh the crucible with the lid and **FA 4**. Record the mass. Describe the appearance of **FA 4**.

appearance of **FA 4**

- Place the crucible in the pipe-clay triangle on top of the tripod.
- Heat the crucible **gently** with the lid on for approximately 1 minute.
- Remove the lid and then heat more strongly for a further 4 minutes.
- Replace the lid and allow the crucible to cool.
- **While the crucible is cooling you may wish to begin work on Question 3.**
- Once the crucible has cooled, reweigh the crucible with the lid and contents. Record the mass.
- Calculate and record the mass of **FA 4** added to the crucible, the mass of the residue and the mass of water lost.
- Describe the appearance of the residue.

appearance of the residue

I	
II	
III	
IV	
V	
VI	

[6]

(b) Calculations

- (i) Calculate the number of moles of manganese(II) sulfate present in the residue. You may assume all the water of crystallisation has been removed.

moles of $\text{MnSO}_4 = \dots\dots\dots$ mol [1]

- (ii) Calculate the number of moles of water lost.

moles of water lost = $\dots\dots\dots$ mol [1]

- (iii) Calculate the value of x in $\text{MnSO}_4 \cdot x\text{H}_2\text{O}$.

x = $\dots\dots\dots$ [1]

- (c) It is possible that **FA 4** did not lose all of the water of crystallisation in your experiment.

- (i) Explain how you could modify the experiment to ensure all water has been removed.

.....
 [1]

- (ii) Explain why your calculated value of x might not change if a small amount of water of crystallisation remained in the residue.

.....

 [1]

[Total: 11]

Qualitative Analysis

Where reagents are selected for use in a test, the **name** or **correct formula** of the element or compound must be given.

At each stage of any test you are to record details of the following:

- colour changes seen
- the formation of any precipitate and its solubility in an excess of the reagent added
- the formation of any gas and its identification by a suitable test.

You should indicate clearly at what stage in a test a change occurs.

If any solution is warmed, a **boiling tube** must be used.

Rinse and reuse test-tubes and boiling tubes where possible.

No additional tests for ions present should be attempted.

3 Half fill the 250 cm³ beaker with water and place it on a tripod and gauze. Heat until the water begins to boil then switch off your Bunsen burner. This is the hot water bath for part **(b)**.

(a) **FA 5** is a solution of a salt which contains one cation and at least one anion, all of which are listed in the Qualitative Analysis Notes.
Sulfur is not present in **FA 5**.

(i) To a 1 cm depth of **FA 5** in a test-tube add aqueous sodium hydroxide.

observation

..... [1]

(ii) You are to carry out tests to allow you to determine the anion present in **FA 5**.

Identify reagents for these tests, carry out these tests and record these tests and observations in a table.

[3]

(iii) Use your results to identify the ions present in **FA 5**.

formulae of ions present in **FA 5** [1]

(iv) Write an ionic equation for the expected reaction between **FA 5** and aqueous ammonia. Include state symbols.

..... [1]

(v) Carry out the following tests and record your observations.

<i>test</i>	<i>observations</i>
<p>Test 1 To a 1 cm depth of FA 5 in a test-tube, add a 1 cm depth of hydrogen peroxide, then</p>	
<p>add aqueous sodium hydroxide.</p>	

[2]

(vi) Suggest what type of reaction occurred when hydrogen peroxide was added to **FA 5**.

..... [1]

(b) **FA 6**, **FA 7** and **FA 8** are butan-1-ol, butan-2-ol and methylpropan-2-ol, but not necessarily in that order.

(i) Carry out the following tests and record your observations.

<i>test</i>	<i>observations</i>		
	FA 6	FA 7	FA 8
<p>Test 1 To a 1 cm depth of dilute sulfuric acid in a test-tube, add 2 or 3 drops of FA 1, KMnO_4, then add a few drops of the alcohol. Shake the tube and place it in the hot water bath. Shake the tube occasionally until there is no further change.</p>			
<p>Test 2 To a 1 cm depth of aqueous iodine in a test-tube, add a few drops of the alcohol, then add drops of aqueous sodium hydroxide until the iodine colour just disappears or remains unchanged. Place the test-tube in the hot water bath.</p>			

[3]

(ii) Use your observations from (b)(i) to identify the alcohols.

alcohol	FA....
butan-1-ol	FA.....
butan-2-ol	FA.....
methylpropan-2-ol	FA.....

[2]

(iii) Write an equation for the oxidation of one of these alcohols with acidified KMnO_4 . Use [O] to represent the oxidising agent.

..... [1]

[Total: 15]

Qualitative Analysis Notes

1 Reactions of aqueous cations

ion	reaction with	
	NaOH(aq)	NH ₃ (aq)
aluminium, Al ³⁺ (aq)	white ppt. soluble in excess	white ppt. insoluble in excess
ammonium, NH ₄ ⁺ (aq)	no ppt. ammonia produced on heating	–
barium, Ba ²⁺ (aq)	faint white ppt. is nearly always observed unless reagents are pure	no ppt.
calcium, Ca ²⁺ (aq)	white ppt. with high [Ca ²⁺ (aq)]	no ppt.
chromium(III), Cr ³⁺ (aq)	grey-green ppt. soluble in excess	grey-green ppt. insoluble in excess
copper(II), Cu ²⁺ (aq)	pale blue ppt. insoluble in excess	blue ppt. soluble in excess giving dark blue solution
iron(II), Fe ²⁺ (aq)	green ppt. turning brown on contact with air insoluble in excess	green ppt. turning brown on contact with air insoluble in excess
iron(III), Fe ³⁺ (aq)	red-brown ppt. insoluble in excess	red-brown ppt. insoluble in excess
magnesium, Mg ²⁺ (aq)	white ppt. insoluble in excess	white ppt. insoluble in excess
manganese(II), Mn ²⁺ (aq)	off-white ppt. rapidly turning brown on contact with air insoluble in excess	off-white ppt. rapidly turning brown on contact with air insoluble in excess
zinc, Zn ²⁺ (aq)	white ppt. soluble in excess	white ppt. soluble in excess

2 Reactions of anions

<i>ion</i>	<i>reaction</i>
carbonate, CO_3^{2-}	CO_2 liberated by dilute acids
chloride, $\text{Cl}^-(\text{aq})$	gives white ppt. with $\text{Ag}^+(\text{aq})$ (soluble in $\text{NH}_3(\text{aq})$)
bromide, $\text{Br}^-(\text{aq})$	gives cream ppt. with $\text{Ag}^+(\text{aq})$ (partially soluble in $\text{NH}_3(\text{aq})$)
iodide, $\text{I}^-(\text{aq})$	gives yellow ppt. with $\text{Ag}^+(\text{aq})$ (insoluble in $\text{NH}_3(\text{aq})$)
nitrate, $\text{NO}_3^-(\text{aq})$	NH_3 liberated on heating with $\text{OH}^-(\text{aq})$ and Al foil
nitrite, $\text{NO}_2^-(\text{aq})$	NH_3 liberated on heating with $\text{OH}^-(\text{aq})$ and Al foil
sulfate, $\text{SO}_4^{2-}(\text{aq})$	gives white ppt. with $\text{Ba}^{2+}(\text{aq})$ (insoluble in excess dilute strong acids)
sulfite, $\text{SO}_3^{2-}(\text{aq})$	gives white ppt. with $\text{Ba}^{2+}(\text{aq})$ (soluble in excess dilute strong acids)

3 Tests for gases

<i>gas</i>	<i>test and test result</i>
ammonia, NH_3	turns damp red litmus paper blue
carbon dioxide, CO_2	gives a white ppt. with limewater (ppt. dissolves with excess CO_2)
chlorine, Cl_2	bleaches damp litmus paper
hydrogen, H_2	'pops' with a lighted splint
oxygen, O_2	relights a glowing splint
